- 1/5 scale model of the actual
  Desert Storm hero
- Powered by a four-"D" engine cluster
- 39" (99 cm) tall
- Diameter: 3.0" (76.2 mm)
- Weight: 12.3 oz. (348 g)
- Altitude range: over 1,000 feet (305 meters)
- Engines: D12-7
No. 2066 $59.99

Command Control™ Launch Controller
Take control of your Pro Series™ launches with the highest powered Estes launch controller ever!
- Rechargeable Ni-Cad battery powered for reliable ignitions
- High current capacity wiring on removable spool
- Voltage selector with external capacity
- Requires one or two 7.2 Volt Ni-Cd car battery packs - Not Included
- External jack for external battery source
- Internal storage for igniters
No. 2234 $34.99

Power Plex™ Launch Pad
The precision launch system the Pro Series™ deserves!
- Single control for launch trajectory
- Rugged, futuristic design
- Field-ready, no modifications or adjustments needed
- Fold-up design and carry handle for easy transportation
- Includes 1/4" (6 mm) launch rod, but can accept 1/8" (3 mm), 3/16" (5 mm) and 1/4" (6 mm) rods.
- Launch up to a 5 lb. (2.3 kg) rocket
No. 2235 $59.99
E-2-X™ Series Precision Build Kits

- The easiest way to build a precision rocket!
- Precision engineered with pre-slotted body tubes for perfect fin alignment.
- Pre-colored plastic nose cone and body parts - no painting necessary
- Colorful, self-adhesive decals for decorating fun

**Bandit™**
- 16 1/2 (42 cm) tall
- Diameter: 1" (2.54 cm)
- Weight: 1.6 oz. (45.5 g)
- Flies to altitudes over 1000 feet (305 meters)
- Engines: A6-3 (First Flight), B4-4, B6-4, B8-5, C6-3, C6-5
- No. 2060 $ 5.99

**Rampage™**
- 19 1/2 (44 cm) tall
- Diameter: 1" (2.54 cm)
- Weight: 1.8 oz. (50.2 g)
- Flies to altitudes over 1000 feet (305 meters)
- Engines: A8-3 (First Flight), B4-4, B6-4, B8-5, C6-3, C6-5
- No. 2061 $ 9.99

**Dagger™**
- 22 1/2 (57 cm) tall
- Diameter: 1" (2.54 cm)
- Weight: 1.9 oz. (53.5 g)
- Flies to altitudes over 1000 feet (305 meters)
- Engines: A9-3 (First Flight), B4-4, B6-4, B8-5, C6-3, C6-5
- No. 2062 $10.99

**Cato™**
- Awesome mid-air disintegration!
- Quick re-assembly for disaster after disaster
- 20" (51 cm) tall
- Diameter: 1.54" (4.2 cm)
- Weight: 4.4 oz. (125 g)
- Engines: B6-0 (First Flight), C6-0
- No. 2071 $10.99

**Bail-Out™**
- Action figure balls out of rocket (figure not included)
- 24 1/4" (62 cm) tall
- Diameter: 1.637" (4.2 cm)
- Weight (without figure): 3.07 oz. (87 g)
- Weight (with figure): 3.67 oz. (104.9 g)
- Flies to altitudes over 500 feet (152 meters)
- Engines: B4-2 (First Flight), B6-4, C6-5
- No. 2070 $11.99

HERE'S HOW TO USE YOUR ESTES CATALOG

Information for each rocket kit is provided on the page where the rocket is displayed. This information includes:

- Skill Level number recommends the modeling skill and experience necessary for a rocketeer to successfully construct the kit. Skill Level 1 kits are suggested for beginners, Skill Level 2 kits for experienced rocketeers, Skill Level 3 kits for advanced modelers and Skill Level 4 kits are recommended for the master modeler.
- Kit Name
- Special features and additional kit information including length, diameter and weight.
- Engines lists all recommended engines to fly the rocket. Engines are listed from least to most powerful. (ft. ft.) indicates which engine should be used to become familiar with your rocket's flight profile.
- Product number for kit which should always be used when ordering.
- Price of the kit or see Price List. All prices in this catalog are subject to change without notice.
- Average Shipping Weight for kits.

PLEASE NOTE: Unless otherwise stated, all model rocketry kits in this catalog require assembly. Launch system, engines, launch supplies, glue, batteries, paint, tools, and finishing materials are not included.

MODEL ROCKETRY IS FUN AND MORE...

You create the model, then... watch it fly! Fly your rocket thousands of feet into the sky. When your recovery system deploys, catch your model...if you can! Invite your friends and family to your next launch. See how much fun a day can be!

Estes model rocketry is a fun and rewarding activity for ages 10 and up. Adult supervision is recommended for those under 12 years of age. It is enjoyed throughout the U.S. and in Australia, Canada, Japan, Mexico, and many European countries. Model rocketry is used as a motivational teaching aid in thousands of schools, colleges, and universities in addition to summer camps and space camps. It is endorsed as a worthwhile educational activity by the Boy Scouts of America, Civil Air Patrol, 4-H, NASA, the U.S. Air Force, the U.S. Army, and the Young Astronaut Program.

Model rocket products comply with the requirements of the U.S. Consumer Product Safety Commission and the launching of model rockets has been exempted from regulation by the Federal Aviation Agency. An American National Standard has been established for model rocketry by the National Fire Protection Association in NFPA 1122 Code for Unmanned Rocket Experiments as established by the National Association of Rocketry is responsible for more than 300 million safe, successful model rocket launches since the beginning of the activity 30 years ago. Estes model rocket engines have been classified as Toy Propellant Devices by the U.S. Department of Transportation and are certified by the N.A.R. to meet the performance standards established by the NFPA.

Estes model rocket engines may be mailed or shipped throughout the U.S. as Flammable Solids per D.O.T. Exemption 7885. Check with your postal authority or shipping agent for the proper packaging and labeling requirements. Regulations differ for shipment outside the U.S., so be sure to check with your travel or transport agent first.

If you have any questions or need further information about Estes model rocketry, please write to the address listed below on our warranty.

ESTES
FULL ONE YEAR WARRANTY

Your Estes product is warranted against defects in materials or workmanship for one year from the date of the original purchase. Any Estes product, except computer software, which, because of a manufacturing mistake, malfunctions or proves to be defective within the one-year warranty period will be repaired or replaced, at Estes' option and at no charge to you, provided it is returned to Estes with proof of purchase.

This warranty does not cover incidental or consequential damage to persons or property caused by the use, abuse, misuse, failure to comply with operating instructions or improper storage of the warranted product. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you.

This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

For repair or replacement under this warranty, please return the defective part of your Estes product with proof of purchase to:

MODEL ROCKETRY SAFETY CODE
(Effective 10-91)

1. Materials—My model rocket will be made of lightweight materials such as paper, wood, rubber, and plastic suitable for the power used and the performance of my model rocket. I will not use any metal for the nose cone, body, or fins of my model rocket.

2. Motors/Engines—I will use only commercially-made NAR certified model rocket engines in the manner recommended by the manufacturer. I will not alter the model rocket engine, its parts, or its ingredients in any way.

3. Recovery—I will always use a recovery system in my model rocket that will return it safely to the ground as it may be flown again. I will use only flame resistant recovery wadding if required.

4. Weight and Power Limits—My model rocket will weigh no more than 1,500 grams (33 pounds) at liftoff, and its rocket engines will produce no more than 320 Newton-seconds or 4.65 Newtons equal 1.0 pound of total impulse. My model rocket will weigh no more than the engine manufacturer's recommended maximum liftoff weight for the engines used, or I will use engines recommended by the manufacturer for my model rocket.

5. Stability—I will check the stability of my model rocket before its first flight, except when launching a model rocket of already proven stability.

6. Payloads—Except for insects, my model rocket will not carry live animals or a payload that is intended to be flammable, explosive, or harmful.

7. Launch Site—I will make my model rocket outdoors in a cleared area, free of tall trees, power lines, buildings, and dry brush and grass. My launch site will be at least as large as that recommended in the following table.

8. Launcher—I will launch my model rocket from a stable launch device that provides rigid guidance until the model rocket has reached a speed adequate to ensure a safe flight path. To prevent accidental eye injury, I will always place the launcher so that the end of the rod is above eye level or I will cap the end of the rod when approaching it. I will keep or disassemble my launch rod when not in use, and I will never store it in an upright position. My launcher will have a jet deflector device to prevent the engine exhaust from hitting the ground directly. I will always cover the area around my launch device of brown grass, dry weeds, or other easy-to-burn materials.

9. Ignition System—The system I use to launch my model rocket will be remotely controlled and electrically operated. It will contain a launching switch that will return to “off” when released. The system will contain a removable safety interlock in series with the launch switch. All persons will remain at least 15 feet (5 meters) from the model rocket when I am igniting model rocket engines totaling 30 Newton-seconds or less of total impulse and at least 30 feet (9 meters) from the model rocket when I am igniting model rocket engines totaling more than 50 Newton-seconds of total impulse. I will use only electrical igniters recommended by the engine manufacturer that will ignite model rocket engine(s) within one second of actuation of the launching switch.

10. Launch Safety—I will ensure that people in the launch area are aware of the pending model rocket launch and can see the model rocket's liftoff before the audible five-second countdown. I will not launch a model rocket using it as a weapon. If my model rocket suffers a misfire, I will not allow anyone to approach it or the launcher until I have made certain that the safety interlock has been removed or that the battery has been disconnected from the ignition system. I will wait one minute after a misfire before allowing anyone to approach the launcher.

11. Flying Conditions—I will launch my model rocket only when the wind is less than 15 miles (24 kilometers) an hour. I will not launch my rocket if it flies into clouds, near aircraft in flight, or in a manner that is hazardous to people or property.

12. Pre-Launch Testing—When conducting research activities with unproven model rocket designs or methods I will, when possible, determine the reliability of my model rocket by pre-launch tests. I will conduct the launching of an unproven design in complete isolation from persons not participating in the actual launching.

13. Launch Angle—My launch device will be pointed within 50 degrees of vertical. I will never use a device that is hazardous to people horizontally.

14. Recovery Hazards—If a model rocket becomes entangled in a power line or other dangerous place, I will not attempt to retrieve it.

As a member of the Estes Model Rocketry Program, I promise to faithfully follow all rules of safe conduct as established in the above code.

ROCKET RECOVERY
TECH-TIP™
In parachute and streamer models, loosely crumple the recommended amount (about 2'/4 times the body tube dia.) of flame-resistant recovery wadding in your rocket's body tube to protect the recovery system from the engine's hot gases.
Lightly dust parachutes with talcum powder to prevent sticking. Fold parachutes to form a spike, fold again, and wrap loosely with shred lines. Fold streamers in half, then roll up. Place parachute or streamer in body tube above wadding. Put nose cone and coiled shock cord into body tube. Wadding, parachute or streamer, and nose cone must not fit tightly. The engine's ejection charge must deploy the recovery system to return your model safely.
SCOUT™ III
*SKILL LEVEL 1.* Updated version of first Estes rocket features pre-cut balsa fins, balsa nose cone, mini-engine power, and break-apart recovery.
Length: 7.5" (19.1 cm) Dia.: 0.763" (19.4 mm)

TECH-TIP™ PAYLOADS
Some model rockets have a special section used to carry cargo. This cargo or “payload” can be a camera, such as AstroCam™ 110, to take aerial photos of your launch site. For competition, try launching a raw egg and retrieving it UNBROKEN! Please do not launch mice, gerbils, and other rodents as the tremendous acceleration and g forces of model rocket flight could be very frightening and harmful to them.

Engines, launch system, glue, and finishing supplies not included.
Avg. Ship. Wt. 16 oz. (453 g)

SR-71 BLACKBIRD™
SKILL LEVEL 3. Our nation's super high-altitude reconnaissance plane flew at ultrasound speeds. So high-tech, nearly all information about this plane is classified. Our model features the same state-of-the-art appearance. SR-71 Blackbird™ flies to 900 feet (274 m) altitudes.
Length: 19” (48.3 cm) Dia.: 0.976” (24.8 mm)
Wt.: 3.2 oz. (90.6 g)
ENGINES: B4-2 (1stFlt.), B6-2, B6-4, B8-5, C6-5.
No. 1942 $14.99

OPTIMA™
SKILL LEVEL 3. You may want a van to transport this monstrous rocket to the launch site! Only 1/2 inch (13 mm) less than 4 feet (122 cm) tall and more than 8 inches (20 cm) around, this model requires a Maxi™ Rod (#2244)
for launch guidance and a “D” engine for lift-off power. Recovery is via 24 inch (60 cm) parachute from altitudes of 390 feet (119 m).
Kit includes chrome and metal-flake pressure sensitive decals, plus a large water-transfer kit decal.
Length: 47.5” (120.7 cm) Dia.: 2.6” (66 mm)
Wt.: 8.3 oz. (234.9 g)
ENGINES: D12-3 (1st Flt.), D12-5.
No. 2035 $37.99

PHOENIX™
SKILL LEVEL 3. Big semi-scale model of the famous Phoenix air-to-air supersonic missile. Impressive in the air and on display. Single “D” powered engine provides a slow, realistic lift-off and flights over 600 feet (183 m). A 3/16 inch (5 mm) Maxi™ Rod (#2244) is required for launch.
Length: 30” (76.2 cm) Dia.: 2.6” (66 mm)
Wt.: 6.6 oz. (186.8 g)
ENGINES: D12-3 (1st Flt.), D12-5.

SOLAR PROBE™
SKILL LEVEL 3. Concept model of a solar-powered asteroid probe. The probe would be used to investigate the presence and quantity of minerals for possible mining. Altitudes of 650 feet (198 m) are possible with a “C” engine.
Length: 20.125” (51.1 cm) Dia.: 1.637” (41.6 mm) Wt.: 1.82 oz. (51.5 g)
ENGINES: A8-3 (1st Flt.), B4-4, B6-4, B8-5, C6-5.
No. 2051 $8.79

LITTLE JOE II™
SKILL LEVEL 3. 1/100th scale model of launch vehicle used to test the Apollo Capsule escape system. After successful testing of the escape system, the Apollo capsules and escape rocket were used in the manned flights of the Saturn Space Program. Our model flies to heights of 425 feet (130 m).
Length: 10.5” (26.7 cm) Dia.: 1.54” (39.1 mm) Wt.: 1.02 oz. (29 g)
No. 0892 $11.99

BLACK HAWK™
SKILL LEVEL 3. Stealth fighter from the 21st Century comes complete with black “drogue” parachute. Twin booms and a unique ejection ducting system make this a great model to display and fly. Estimated maximum altitudes are 800 feet (244 m).
Length: 15.313” (38.9 cm) Dia.: 0.976” (24.8 mm) Wing Span: 8.125” (20.6 cm) Wt.: 2.67 oz. (75.5 g)
ENGINES: A8-3 (1st Flt.), B4-4, B6-4, C6-5.

SUPER VEGA™
SKILL LEVEL 4. Slow, thrilling lift-offs to heights beyond 250 feet (76 m) will make this large exotic rocket one of your favorites. A 3/16 inch (5 mm) Maxi™ Rod (#2244) is required for launch.

Length: 36.625” (93 cm) Dia.: 1.637” (41.6 mm) Wt.: 5.4 oz. (152.8 g)
ENGINE: D12-3
No. 2036 $31.99

BLACK BRANT II™
An outgrowth of Black Brant I Program, Black Brant II’s payload capacity was increased to 6.2 cu. ft. (17 cu. m) by changing the nose cone’s shape. The airframe (17.2” [43.7 cm] dia. x 27” 8” [8.4 m] tall) was stabilized by 3 fixed fins. Total fin span was 39” (99.1 cm). The motor delivered 16,000 lbs. (7.26 metric tons) of thrust over a 25 second burn time. Total vehicle weight with propellant was 5,642 lbs. (11,98 kg). First flight was October, 1959.

Used by the Canadian Armament Research and Development Establishment for upper atmosphere research studies, Black Brant IIs were fired mostly in Canada’s Northlands, carrying up to 150 lbs. (68 kg) of payload to altitudes of 100 statute miles (161 km).

SKILL LEVEL 4. Beautiful model of Canadian sounding rocket features a 1 to 13 scale ratio. This powerful D-engine model can fly well over 1200 feet (366 m).

Length: 24.875” (63.2 cm) Dia.: 1.325” (33.7 mm) Wt.: 2.29 oz. (64.8 g)
ENGINES: D12-5 (1st Fli.), D12-7
No. 1958 $10.99

EXPLORER AQUARIUS™
SKILL LEVEL 4. Futuristic craft used in the exploration of distant star systems. Almost two feet (61 cm) long, this model will test your construction skills. It’s beautiful on display and in flight. Includes removable plastic display engine nozzle. A 3/16” (5 mm) Maxi™ Rod (#2244) is required for flight.

Length: 21.75” (55.2 cm) Dia.: 2.75” (69.9 mm) Wt.: 4.2 oz. (118.9 g)
ENGINES: D12-3 (1st Fli.), D12-5.

MODEL ROCKET COMPETITION AND CONTESTS

Contests are fun. See whose rocket flies the highest or stays in the air the longest. Find out who has the best looking model or whose scale model is most precise. Who can cause their rocket to land via parachute where they want it to land?

These contests are fun and educational. Compete with your friends or classmates. If you wish to compete in local, national, or international events or set a national or world record, you should join the National Association of Rocketry, 1311 Edgewood Drive, Altoona, WI 54720. Your membership includes many benefits such as discounts, insurance, and a monthly subscription to American Spacemodeling Magazine.

SPACE SHUTTLE™
On a standard mission, the Orbiter will remain in orbit for 7 days, return to the Earth, land like an airplane, and be readied for another flight in 14 days. It can deploy and retrieve satellites and can place deep-space vehicles in their initial low-Earth orbit.

SKILL LEVEL 4. Dramatic 1/162 scale reproduction of America’s premiere space vehicle. Designed as a reusable near space transportation system with satellite deployment and retrieval capability. Delivers really spectacular flights. Semi-scale Orbiter employs glide recovery just like the real thing while boosters and external tank return via 18 inch (45 cm) parachute recovery. Our model features special stabilizer fins for atmospheric flight which remove easily for display. Kit components include injection molded, vacuformed plastic and die-cut parts. Incredible display model with authentic NASA decor.

Shuttle Length: 13.6" (34.5 cm) Dia.: 2.04" (51.8 mm) Orbiter Length: 9" (22.9 cm) Orbiter Wingspan: 7.1" (18 cm) Wt.: 4.37 oz. (124 g)
ENGINES: C5-3 (1st FIt.), C6-3.

SATURN IB™
An integral part of the Saturn Space Program, the Saturn IB's first stage was composed of 8 H-1 engines creating thrust of over 1/4 million pounds (680 metric tons). The second stage power was supplied by one J-2 engine with 200,000 pounds (90.7 metric tons) of thrust. The Saturn IB could place 40,000 pounds (18 metric tons) in low-Earth orbit. Saturn IB flights were used to test the launch vehicle, Apollo spacecraft's systems and the Apollo spacecraft's heat shields for re-entry capability.

SKILL LEVEL 4. 1/100th scale model of the predecessor of the mighty Saturn V. Our model includes high-relief plastic body wraps, plastic tank shroud, Apollo capsule, and engine display nozzles. It also features special sub-assembly painting procedures. Recovery from launches to 425 feet (130 m) are accomplished when the main stages are lowered under an 18 inch (45 cm) parachute and the upper stage and Apollo capsule are lowered via a 12 inch (30 cm) parachute attached to a special recovery harness. A 3/16 inch (5 mm) Maxi™ Rod (#2244) is required for launch.

TITAN III™
SKILL LEVEL 4. Big and exciting, this challenging rocket is a 1/73rd scale model of Martin Marietta's Titan III. Plastic engine display nozzles and balsa wood stabilizing flight fins are included. Both are removable. A 3/16 inch (5 mm) Maxi™ Rod (#2244) is required for flight.
Length: 28” (71.1 cm) Dia.: 2.22” (56.4 mm)

SATURN V™
Engineers at the Army Ballistic Missile Agency in Huntsville, AL in 1957 proposed a large rocket named Juno V. In 1958, the project was approved. NASA was activated that same year. In 1959, the project was renamed Saturn and transferred to NASA. First successful flight of the Saturn V was on November 9, 1967. Eleven times a Saturn V carried men to the moon. Six of these missions included a landing on the lunar surface. All returned safely.
SKILL LEVEL 4. This is the finest 1/100 scale model rocket of the Mighty Saturn V™ ever designed. Keith Niskern, designer of the first and most famous Saturn V™ model, has completely redesigned and refined the model. Scaled from official NASA drawings, the finished model is 433/4 inches (109.9 cm) tall and lifts off to more than 100 feet (30.5 m) with one powerful D12-3. The bottom section is lowered gently with two huge 24 inch (60 cm) parachutes and the upper section is recovered via special recovery harness and 18 inch (45 cm) parachute.
The internal structure has been redone to ease assembly and assure safer and more realistic recoveries. The balsa fins have been moderately overscaled for stable flight. No fin extensions or other alterations are required. Improved and amplified detailing includes an Apollo capsule, escape tower, and main engine display nozzles which remove easily for flight. Truly a magnificent scale reproduction. A 3/16 inch (5 mm) Maxi™ Rod (#2244) is required for launch.

MODEL ROCKET ENGINES

Estes model rocket engines have been proven consistent and reliable in more than 300,000,000 launches.

The design and development of the Estes model rocket engines were the real beginning of the safe, educational and fun activity model rocketry has become. Thirty-four years of Estes engineering has produced today's safety-proven model rocket engine. Manufactured under strict, quality-controlled conditions within exacting tolerance limits (More than 99% of all Estes engines are static-tested). Estes engines comply with the codes of the National Fire Protection Association and are certified by the National Association of Rocketry.

IGNITER PLUGS
- For consistently reliable and safe ignitions, igniter plugs securely hold the igniter into the nozzle of the engine.
- Igniter plugs are available for all of Estes regular engines.

The following is a list of engine size and respective color of the igniter plug. Engines will be color-coded to match the plug color.

PORTA-PAD® II
LAUNCH PAD
Sturdy launch pad may be used with any Estes launch controller to launch any Estes rocket. You'll love the easy set-up for launching and quick take-down for carrying and storage. Bright, easy-to-see pad features stable design. Adjustment for air direction cannot be tilted more than 30° from vertical. Easy to adjust, no tools required. Other features include a steel blast deflector plate and a 32 inch (81 cm) by 1/8 inch (3 mm) diameter two-piece launch rod. Pad also accommodates the Estes Maxi™ Rod (#2244) to launch your really large Estes models — Not Included. Bright yellow launch rod safety cap provides good visibility and protection. The stand-off holds most Estes rockets above the blast plate allowing reliable igniter connections. A safety key for your Estes controller is also included. Use the enclosed cord to attach it to the safety cap. You'll always know just where it is!

PARTS OF A MODEL ROCKET:

Model rocket kits are constructed of light-weight materials such as balsa wood, paper, and plastic, as shown in this diagram. Nearly all Estes parts have the same series description number and are interchangeable. For instance a body tube BT-20 will mate with a balsa nose cone BNC-20B. A balsa adapter TA-2060 will adapt a BT-20 to a BT-60. An AR-2050 will center a BT-20 in a BT-60. When ordering parts use both the product number and the description.

**FIN STOCK**
Top quality balsa sheeting for making fins for model rockets. For maximum strength, grain of wood should follow the leading edge of fin.

**ENGINE MOUNTS**
Use Estes high performance engine mounts for your original designs. All engine mounts feature easy-to-assemble instructions and lightweight components. Avg. Ship. Wt. 8 oz. (141.75 g)

**ENGINE BLOCKS**
Switch from one size body tube to another for payload capsules, parachute compartments, etc. Can be hollowed to make a passage for ejection gages. All adapters have at least 1/2' mating surface on each.

**STAGE COUPLERS**
For multi-staging, joining body tubes, positioning adapter tubes, etc. Make perfect guides for cutting body tubes and sanding cut edges of body tubes, too. Ship Wt. for all is 3 oz. each.

**NOSE BLOCKS**
Use balsa nose blocks in payload sections and anywhere else a solid bulkhead is required.
