IMPORTANT:

Read all instructions before beginning work on your model. Make sure you have all parts and materials. When you are thoroughly familiar with the assembly procedure, begin construction. Check off each step as you complete it. In each step, test-fit the parts together before applying any glue. If some part doesn't fit properly, sand lightly or build up as needed for precision assembly.

IN ADDITION

You will need a few tools and supplies, so collect them before you start. Here's the list:

- A. White Glue: Estes Rocket Glue, Elmer's, or similar.
- B. Scissors: Almost anything which will cut paper is fine.
- C. Knife: A sharp model knife or single edge razor blade.
- D. Pencil: A pencil is best; ball point ink can show through the paint.
- E. Ruler: Measure distances — don't guess.
- F. Sandpaper: Fine and extra-fine for a smooth finish on your fins.
- G. Sanding Sealer: Fills the holes in the balsa.
- H. Paint: White enamel spray and red enamel spray or "brush-on".
- I. Masking Tape: To anchor shock cord and to mask off for painting red nose.
