Halley's Tail

#1952

ASSEMBLY TIP
Read all instructions before beginning work on your model. Make sure you have all parts and supplies. Test-fit all parts together before applying any glue. If any parts don't fit properly, sand as required for precision assembly.

PARTS AND SUPPLIES
Locate the parts shown below and lay them out on the table in front of you. In addition to the parts included in the kit you will also need:

- Modeling Knife
- Scissors
- Pencil
- Paint Brush
- Ruler
- Sandpaper
- Plastic Model Cement
- Masking Tape
- White Glue
- Sanding Sealer
- Enamel Spray Paint (Blue)

BODY TUBE
- Decal
- Halley's Tail

NOSE CONE
- Sheet Pre-Cut Fins
- Parachute
- Nose Cone Insert
- Engine Mount Tube
- Tape Discs
- Shroud Line
- Shock Cord

ENGINE HOOK
- Adapter Rings
- Ball
- Streamer
ROCKET ASSEMBLY

1. Mark spacer tube 1 inch and 2½ inches from one end.
   B. Cut 1/8 inch long slit at 2½ inch mark.
   C. Insert one end of engine hook into slit.
   D. Sand inside edges of both adapter rings.
   E. Slide one ring onto front of tube and down to 1 inch mark. Glue both sides of ring/tube joint.
   F. Apply glue around front of tube. Slide remaining ring into place.

2. A. Fine sand balsa die-cut sheet. Carefully remove fins by freeing edges with sharp knife.
   B. Stack fins together. Sand all edges smooth.

3. A. Using a piece of scrap balsa, smear glue inside body tube 2 inches from one end.
   B. Push engine mount in until tube ends are even. Engine hook must extend from end of body tube.

4. A. Cut out tube marking guide from front of instructions.
   B. Wrap guide around the tube and tape. Mark tube at arrows. Remove guide and save.
   C. Draw straight lines connecting each pair of marks.
   D. Extend launch lug line full length of tube.

5. A. Lay fins on pattern to find gluing (root) and front (leading) edges.
   B. Position and glue fins on alignment lines one at a time. Let each dry several minutes before applying the next one.
   C. Adjust fins to project straight out from tube.
   D. Do not set rocket on fins while glue is wet.

FIN PATTERN

FINS MUST BE ATTACHED CORRECTLY FOR STABLE FLIGHT!
6. Glue launch lug on launch lug line 3 inches from rear of rocket.

7. A. Cut shock cord mount from tube marking guide.
   B. Crease on dotted lines by folding. Spread glue on section 1 and lay end of shock cord into glue. Fold over and apply glue to back of first section and exposed part of section 2. Lay shock cord as shown and fold mount over again.
   C. Clamp unit together with fingers until glue sets.

8. A. Apply glue to inside front of body tube to cover an area no less than 1 inch to 2 inches from end. The glued area should be same size as shock cord mount.
   B. Press mount firmly into glue as shown.
   C. Hold until glue sets.

9. A. Apply a glue reinforcement to each fin/body tube joint and each side of launch lug.
   B. Support rocket as shown until glue dries.

10. A. Cut 3" length of shroud line.
    B. Pass through hole in ball.
    C. Center streamer over ball, and tie line ends tightly using double knot.
    D. Trim excess line.

11. A. Cement nose cone and nose cone insert together with plastic cement.
    B. Push nose cone insert firmly into nose cone end. Let dry.

12. A. Cut out parachute on edge lines.
    B. Cut three 22 inch lengths of shroud line.
    C. Form small loops with shroud line ends and press onto sticky side of tape discs.
    D. Attach tape discs with line ends to top of parachute as shown.
    E. Firmly press tape discs into place until both tape discs and parachute material are molded around shroud line loops.
    F. Pass shroud line loops through loop on nose cone. Pass parachute through loop ends and pull lines against the nose cone.
    G. Tie free end of shock cord to nose cone eyelet.
FINISHING YOUR ROCKET

Apply sanding sealer to wood parts with small brush. When sealer is dry, lightly sand all sealed surfaces. Repeat sealing and sanding until balsa grain is filled and smooth. When sanding sealer and glue are completely dry, paint model with blue spray enamel. Refer to panel photo for color locations. Follow instructions on spray can for best results. Let paint dry overnight before applying self-adhesive decals.

When your rocket reaches the very highest part of its flight (apogee) and the model rocket engine ejects the recovery system, your Halley’s Tail model will launch a small “red comet with a silver tail”. Be certain to watch both Halley’s Tail and “comet” descend to Earth!

ROCKET PREFLIGHT

WRAP LINES LOOSELY AROUND ‘CHUTE
INSERT PARACHUTE IN ROCKET

FOLD STREAMER TIGHTLY, INSERT STREAMER & BALL ON TOP OF ‘CHUTE
INSTALL NOSE CONE IN PLACE

PREPARE ENGINE

SEPARATE THE IGNITERS

ENGINE
INSERT IGNITER
FOLD OVER

IGNITER TIP MUST TOUCH PROPELLANT DEEP INSIDE NOZZLE OPENING
APPLY AND FIRMLY PRESS MASKING TAPE IN PLACE
INSTALL ENGINE IN ROCKET
HOOK-MUST LATCH OVER END OF ENGINE

LAUNCH SUPPLIES

To launch your rocket you will need the following items:
—An Estes model rocket launching system
—Estes Parachute recovery wadding (No. 2274)
—Recommended Engines: A8-3, B4-4, B6-4, B8-5, C6-5
Use A8-3 engine for your first flight, to become familiar with your rocket’s flight pattern.

FLYING YOUR ROCKET

Choose a large field away from power lines, tall trees, and low flying aircraft. Try to find a field at least 250 feet square. The larger the launch area, the better your chance of recovering your rocket and your comet. Football fields and playgrounds are great.

Launch area must be free of dry weeds and brown grass.

Launch only during calm weather with little or no wind and good visibility.

Don’t leave parachute packed more than a minute or so before launch during cold weather (colder than 40° Fahrenheit 4° Celsius).

MISFIRES

Failure of the rocket engine to function properly is nearly always caused by a failure to install the igniter correctly. This failure permits the igniter to heat and burn into two pieces without igniting the engine.

FOR YOUR SAFETY AND ENJOYMENT

Always follow the NAR-HIA* MODEL ROCKETRY SAFETY CODE while participating in any model rocketry activities.
