ASSEMBLY TIP
Read all instructions before beginning work on your model. Make sure you have all parts and supplies. Test-fit all parts together before applying any glue. If any parts don’t fit properly, sand as required for precision assembly.

PARTS AND SUPPLIES
Locate the parts shown below and lay them out on the table in front of you. In addition to the parts included in the kit you will also need:

- Scissors
- Pencil
- Ruler
- Sandpaper
- White glue
- Paintbrush
- Modeling knife
- Enamel paint (Red, Light Gray)
- Masking tape
- Sanding sealer

- Nose cone
- Shock cord
- 72" shroud line
- Engine mount tube
- Engine hook
- Launch lug
- Tape disc set
- Parachute
- Body tube
- Decal
- Sheet pre-cut fins
- Adapter rings
ROCKET ASSEMBLY

1. Mark engine mount tube 1 inch and 2 1/2 inches from one end.
B. Cut 1/8 inch long slit at 2 1/2 inch mark.
C. Insert one end of engine hook into slit.
D. Slide ring onto front of tube and down to 1 inch mark and glue both sides of ring/tube joint.
E. Apply glue around front of tube. Slide remaining ring into place.

2. A. Fine sand balsa die-cut sheet. Carefully remove fins by freeing edges with sharp knife.
B. Glue wingtips to underside of fin tips at 90° as shown.
C. Glue small pointed piece to bottom of third fin as shown.

3. A. Using a piece of scrap balsa, smear glue inside body tube 2 inches from one end.
B. Push engine mount in tube until ends are even.

4. A. Cut out tube marking guide from front of instructions.
B. Wrap guide around the tube and tape. Mark tube at arrows. Remove guide and save.
C. Draw straight lines connecting each pair of marks.
D. Extend launch lug line full length of tube.

5. A. Position and glue fins on alignment lines one at a time as shown.
B. Before glue takes a permanent set, place rocket on top of fin pattern guide (on back of panel) and adjust fins to correct positions as shown. Once the fin position is completed, allow the glue to dry before proceeding. Do not let the rocket rest on its fins while glue dries.
6
A. Glue launch lug straight on launch lug line 4½ inches from rear of tube as shown.

7
A. Cut shock cord mount from tube marking guide.
B. Crease on dotted lines by folding. Spread glue on section 1 and lay end of shock cord into glue. Fold over and apply glue to back of first section and exposed part of section 2. Lay shock cord as shown with fingers and fold mount over again.
C. Clamp unit together with fingers until glue sets.

8
A. Apply glue to inside front of body tube to cover an area no less than 1 inch to 2 inches from end. The glued area should be same size as shock cord mount.
B. Press mount firmly into glue as shown.
C. Hold until glue sets.

9
A. Apply a glue reinforcement to each fin/ body tube joint and each side of launch lug.
B. Support rocket as shown until glue dries.

10
Trim excess plastic from around sides of nose cone with a sharp knife. Also remove any excess plastic from inside molded eyelet. Wipe nose cone with damp cloth to remove oil and dirt.

11
A. Cut out parachute on edge lines.
B. Cut three 23" lengths of shroud line.
C. Form small loops with shroud line ends and press onto sticky side of tape discs.
D. Attach tape discs with line ends to top of parachute as shown.
E. Firmly press tape discs into place until both tape discs and parachute material are molded around shroud line loops.
F. Pass shroud line loops through eyelet on nose cone. Pass parachute through loop ends and pull lines against the nose cone.
G. Tie free end of shock cord to nose cone eyelet.
FINISHING YOUR ROCKET

Apply sanding sealer to wood parts with small brush. When sealer is dry, lightly sand all sealed surfaces. Repeat sealing and sanding until balsa grain is filled and smooth. When sanding sealer and glue are completely dry, paint model with spray enamel. Follow instructions on spray can for best results. Let paint dry overnight before masking to paint second color. To apply decals, cut each one, dip in lukewarm water for 20 seconds, and hold until it uncurls. Refer to photograph on front page and/or front of panel for decal placement. Slip decal off backing sheet and onto model. Blot away excess water. For best results, let decals dry overnight and apply a coat of clear spray paint to protect decals.

ROCKET PREFLIGHT

CRUMPLE AND INSERT 2 SQUARES OF RECOVERY WADDING

INSERT PARACHUTE IN ROCKET

INSTALL NOSE CONE IN PLACE

PREPARE ENGINE

SEPARATE THE IGNITERS

INSERT IGNITER

ENGINE

IGNITER TIP MUST TOUCH PROPELLANT DEEP INSIDE NOZZLE OPENING

APPLY AND FIRMLY PRESS TAPE DISC OR MASKING TAPE IN PLACE

HOOK MUST LATCH OVER END OF ENGINE

INSTALL ENGINE IN ROCKET

LAUNCH SUPPLIES

To launch your rocket you will need the following items:
—An Estes model rocket launching system
—Estes Parachute Recovery Wadding (No. 2274)
—Recommended Engines: B4-4, B4-6, B6-4, B6-5, C5-3 C6-3, C6-7
Use B4-4 engine for your first flight to become familiar with your rocket’s flight pattern.

FLYING YOUR ROCKET

Choose a large field away from power lines, tall trees, and low flying aircraft. Try to find a field at least 250 feet square. The larger the launch area, the better your chance of recovering your rocket. Football fields and playgrounds are great.

Launch area must be free of dry weeds and brown grass.

Launch only during calm weather with little or no wind and good visibility.

Don’t leave parachute packed more than a minute or so before launch during cold weather. [Colder than 40° Fahrenheit (4° Celsius)].

MISFIRES

Failure of the rocket engine to function properly is nearly always caused by a failure to install the igniter correctly. This failure permits the igniter to heat and burn into two pieces without igniting the engine.

FOR YOUR SAFETY AND ENJOYMENT

Always follow the NAR-HIA* MODEL ROCKETRY SAFETY CODE while participating in any model rocketry activities.

*National Association of Rocketry-The Hobby Industry of America

COUNTDOWN AND LAUNCH

LAUNCH LUG

LAUNCH ROD

WRAP MASKING TAPE AROUND LAUNCH ROD LEAVING ENOUGH TAPE EXTENDING OUTWARD TO SUPPORT ROCKET UNDER ENGINE.

MICRO-CLIPS MUST NOT TOUCH BLAST DEFLECTOR OR EACH OTHER

5 REMOVE SAFETY KEY to disarm the launch controller.

4 Remove safety cap and slide launch lug over launch rod to place rocket on launch pad. Make sure the rocket slides freely on the launch rod.

3 Attach micro-clips to the igniter wires. Arrange the clips so they do not touch each other or the metal blast deflector. Attach clips as close to protective tape on igniter as possible.

2 Move back from your rocket as far as launch wire will permit (at least 15 feet).

1 INSERT SAFETY KEY to arm the launch controller.

LAUNCH!!! PUSH AND HOLD LAUNCH BUTTON UNTIL ENGINE IGINITES

Remove safety key—Replace cap on rod.
